# HEMANTO BAIRAGI

7-56 Radcliffe Cres S.E, AB T2A 6L9 Calgary 5872168171

hemanto.bairagi@ucalgary.ca

#### **SUMMARY**

- Software Engineering specializing in Machine Learning, Artificial Intelligence & Python development.
- Transitioned from Physics, to Financial Physics and Engineering to Software Engineering professionally.
- GitHub Link: https://github.com/Orko24
- LinkedIn Link: https://www.linkedin.com/in/hemanto-bairagi-865027101/

# SKILLS

- Software Engineering & Software Development.
- Python Programming & Machine Learning.
- Databases Development.

- DevOps & DevSecOps.
- Data Science & Analysis.
- Application Support.

## **EXPERIENCE**

Lead Software Engineer and Software Architect IBM Startup Partner Program; Adamas Audio:

Jan 2022 to present

- Role was to design, develop, produce, deploy code for Adamas Audio. Currently running ongoing postproduction support. This postproduction support is aimed to support the web application long term.
- Developed Adamas Audio in a client-focused, service-minded approach in an agile development environment with a strong sense of urgency.
- Skills gained: Python, Java, Machine Learning, Artificial Intelligence, Machine Learning Libraries like Keras, PyTorch, Tensorflow, Sci-kit Learn, Pandas, Numpy, etc. API development, Frontend: HTML, CSS, JavaScript, Node.js, ETL software. Programming Languages like: Python, Java, C++, C#, C, Golang, MATLAB, Mathematica, SQL. Site Operation Management, DNS, Domain Transfer, Site Migration, Cloud Computing, Django, Flask, Redis & Celery data development and integration. Linux, Bash Script, Git, GitHub, GitOps, Cryptography, SSL & Cyber Security, Data Analysis & Data Science. Network Engineering concepts like TCP/IP, multicasting, and routing. Windows Server Development and Linux Server Development.
- Recently Site Operations Management and Migration was performed on the site to migrate the web application from Liquid-web dedicated servers to IBM Bare-metal Servers.
- Service went down April 14<sup>th</sup> due to cost, have been approved by IBM's partner program and am currently receiving \$3000 USD for 6 months in funding starting May 1st.
- To receive this funding, its requirements had to be analyzed and discussed with IBM stakeholders to ensure adequate levels of funding for computational resources required.
- Postproduction updates written in Golang, Java and C++ to ensure scalability and patentability when profitable, are being applied. Update and update progress hosted in this GitHub repository, and will be free and open source: https://github.com/Orko24/FFMPEG\_Golang\_replacement
- Adamas Audio was coded, designed, produced and deployed on a Windows OS server, and partially tested and configured in a Linux Server environment to isolate post production problems as indicated above.
- The purpose of Adamas Audio was to allow customers to create custom audiobooks at scale. It is currently hosted at: <a href="https://www.adamasaudio.com">https://www.adamasaudio.com</a>. Full article detailing it can be found <a href="https://adamasaudio.medium.com/adamasaudio-machine-learning-and-web-development-to-produce-cheap-audiobooksaud-voice-cloning-a05608e4485f">https://www.adamasaudio.com</a>. - The components of Adamas Audio were Frontend REST APIs, client data management system, Backend Data Deriving API's, Django Middleware. These components were developed in a Test-driven environment using agile methodology.
- Frontend REST API was coded in HTML, CSS, JavaScript. Initialized frontend of the data pipeline. Django Middleware integrated data pipeline from frontend to backend. Backend data processing APIs built in Python, C++, C#, C, Java, Golang, SQL. Client database management system doubled up as a data governance policy, to allow security at scale.

- Integrated frontend to backend data pipeline allowed derived datasets and data products per client API request to be created and passed from server to client via the pipeline built through Django Middleware.
- Data products were built using Machine Learning libraries like: Pytorch, Tensorflow, Keras, Scikit-learn, Pandas, Numpy, etc.
- Adamas Audio was hosted using Apache, Apache server instance templates written in C/C++ are given here: <a href="https://github.com/Orko24/Apache django ssl web integration">https://github.com/Orko24/Apache django ssl web integration</a>
- SSL certificates were integrated into a DNS to Apache pipeline. This allowed HTTPS technology to encrypt all web traffic per client API request. Django-RQ, SQL and Redis were utilized to ensure all client requests run asynchronously per request at scale, to the server IP.

Quant-connect June 2020 to Jan 2022

# Algorithmic Trader June 2020 to Jan 2022

- Made the transition from Physics to Financial Physics and Financial Engineering. Allowed the gaining of experience in Financial Engineering, Software Development and Algorithm Development.
- Algorithms were developed in Python.
- Utilized Data Visualization Libraries like Matplotlib, Seaborn, and Pandas to visualize, present and analyze trading data.
- Machine Learning Libraries like Tensorflow, Keras, SciKit-Learn, were utilized to identify patterns within trading data. This was done to create predictive analytics regarding share and commodity prices.
- The lean trading engine Framework was utilized for live trading and back testing of Algorithms: https://www.lean.io/#topic100.html.
- Scanning Software to perform analysis on but not limited to trading volume, outstanding share volume, news
  feeds regarding trading catalysts and trading sentiment. Data generated was integrated into machine
  learning predictive system to produce a scoring system, to create buy/sell signals for equities and
  commodities.

Undergraduate Researcher

Sept 2019 to June 2020

## University of Calgary

- Gained strong analytical and problems skills gained, learning to quickly learn new technologies and research approaches.
- Ability to work around the clock in multiple shifts (nights/early mornings)
- Gained strong organizational skills, including the ability to organize schedules and prioritize to be able deal with high pressure work loads and time constraints with composure.
- Strong written and verbal skills gained and exemplified in my undergraduate thesis given in this GitHub repository:
  - https://github.com/Orko24/ODMR thesis/blob/master/Hemanto Bairagi Final Report Draft 3%20(1).pdf
- Utilized C++/C to program an Arduino to track photons emitted from experimental green laser.
- Experience utilizing programming languages like Python, C++, C, Mathematica, and MATLAB in a professional research setting.
- Link verifying research: http://quantumalberta.ca/wp-content/uploads/2020/12/IQST-2020-Report.pdf
- ODMR thesis: Worked on building a building an optically detected magnetic resonance (ODMR) microscope, with the intent of mind to use qubits to produce nanoscale imagery and video.

#### **EDUCATION & TRAINING**

Bachelor of Science: Astrophysics University of Calgary Calgary, AB

Achieved Honors

From Sept 2016 to Feb 2021

Dean's List Honoree [2020]

• GPA: 3.5/4.0

Bachelor of Science: Physics University of Calgary From Sept 2016 to Feb 2021

Achieved Honors

• Dean's List Honoree [2020]

GPA: 3.5/4.0
